DEVELOPMENTAL AND ADAPTED PHYSICAL EDUCATION
Considerations in Conducting Program.

Developmental and adapted physical education is ----- as a service meeting the individual needs of boys and girls who are ----- in some respect, who have functional defects and deficiencies amenable to improvement ----- exercise, or who possess other inadequacies which interfere with their successful ----- in the diversified and vigorous activities of the general physical education ----- . If such individual needs are to be met by physical education, various considerations are ----- for successful programs, including a scientific approach to content and method; the use of adequate measurement and evaluation processes; employment of teachers with special ----- and abilities; utilization of effective motivational -----; adoption of proper organizational and administrative ----- .

The scientific approach

Physical education has long used the ----- developed by various basic sciences to an understanding of muscle activities and to the application of these activities in the service of the ----- . Particularly important are the sciences of biology, physiology, anatomy, ----- , sociology and psychology. Furthermore, chemistry and physics have contributed helpful facts to this understanding. All of these subjects have provided a basic ----- of scientific knowledge related to body ----- in its many physical educative phases.

A thorough understanding of these sciences is especially important for the teacher engaged in conducting developmental and adapted physical education; he must constantly apply his knowledge and technical ----- to individual student problems rather than through a general or group process to the problems of many students as a unit. To qualify as a specialist in this ----- , he should seek advanced study of these sciences in their relation to pathological conditions. Subsequently, he needs to keep up with advancing knowledge in these fields and constantly re-evaluate their ----- to his work.

Much other ----- knowledge of value to developmental and adapted physical education is being developed today through many other ----- . Included among these are the fields of medicine and ----- , sports medicine, nutrition, health education, child ----- and development, educational psychology, mental
